Provider

Modul Khusus Kelas Pemrograman.

CPanel

- CPanel adalah kontrol panel sebuah hosting yang mempermudah user dalam pengelolaan domain suatu website.

cPanel®

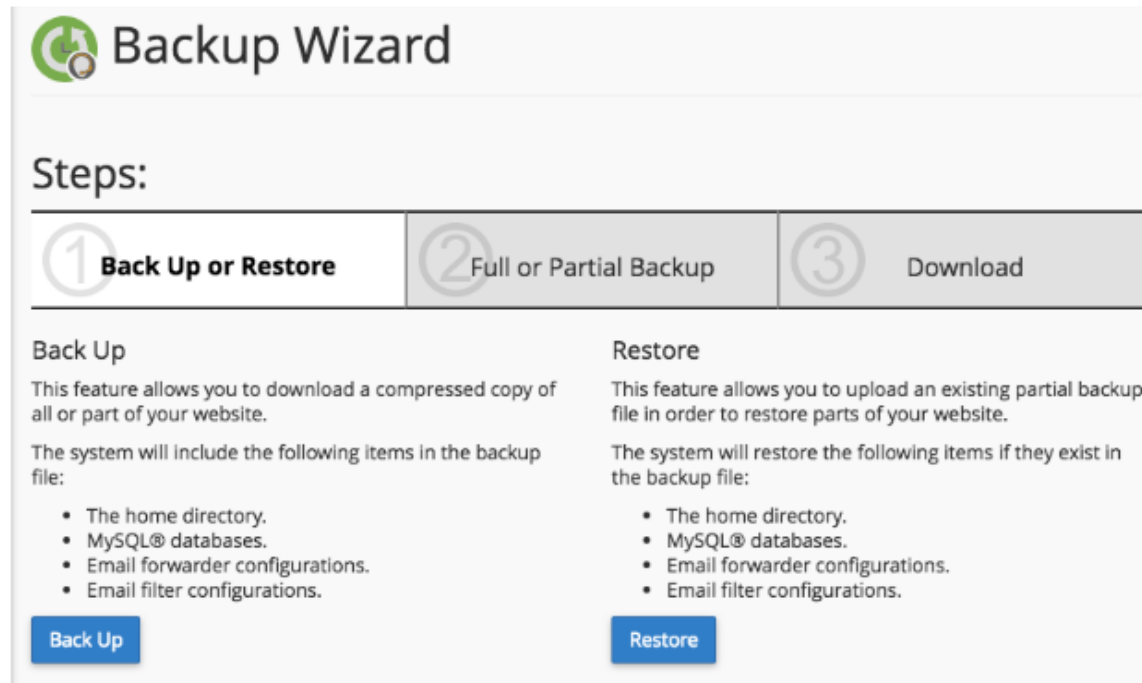

Tools

- Ada beberapa tools pokok yg harus dikelola diantaranya:
 - Backup Wizard
 - Email Accounts
 - FTP Accounts
 - Awstats
 - IP Blocker
 - Banyak lagi...

Backup Wizard

- Diperuntukkan untuk melakukan backup & restorasi baik itu source code maupun database.

The screenshot shows the 'Backup Wizard' interface. At the top, there's a green circular icon with a white 'B' and the text 'Backup Wizard'. Below this, the 'Steps:' section shows three numbered steps: 1. Back Up or Restore (active), 2. Full or Partial Backup, and 3. Download. The main content area is divided into two columns: 'Back Up' and 'Restore'. The 'Back Up' column describes downloading a compressed copy of the website and lists items included in the backup: The home directory, MySQL® databases, Email forwarder configurations, and Email filter configurations. A blue 'Back Up' button is at the bottom. The 'Restore' column describes uploading an existing partial backup file to restore parts of the website and lists items that will be restored: The home directory, MySQL® databases, Email forwarder configurations, and Email filter configurations. A blue 'Restore' button is at the bottom.

Backup Wizard

Steps:

- 1 Back Up or Restore**
- 2 Full or Partial Backup
- 3 Download

Back Up

This feature allows you to download a compressed copy of all or part of your website.

The system will include the following items in the backup file:

- The home directory.
- MySQL® databases.
- Email forwarder configurations.
- Email filter configurations.

Back Up

Restore

This feature allows you to upload an existing partial backup file in order to restore parts of your website.

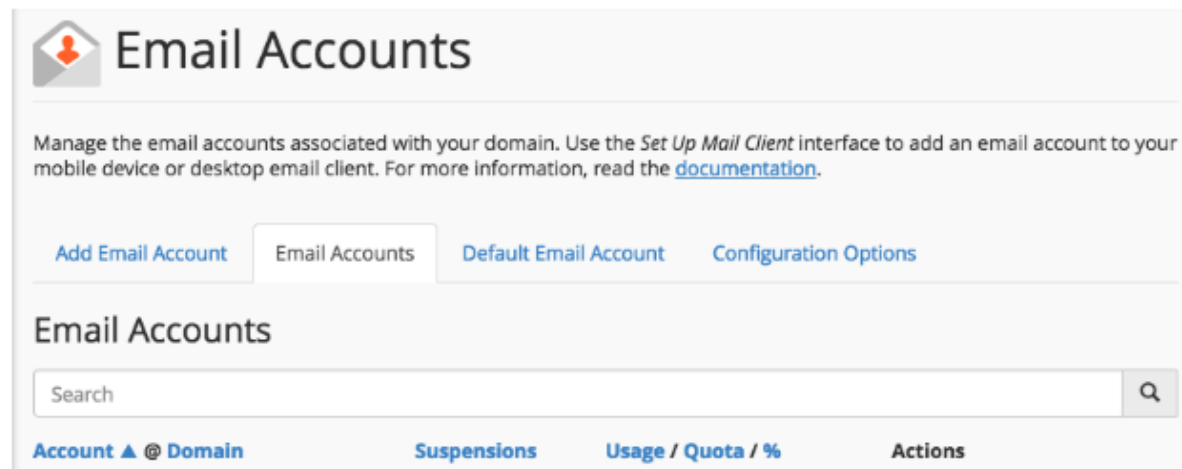

The system will restore the following items if they exist in the backup file:

- The home directory.
- MySQL® databases.
- Email forwarder configurations.
- Email filter configurations.

Restore

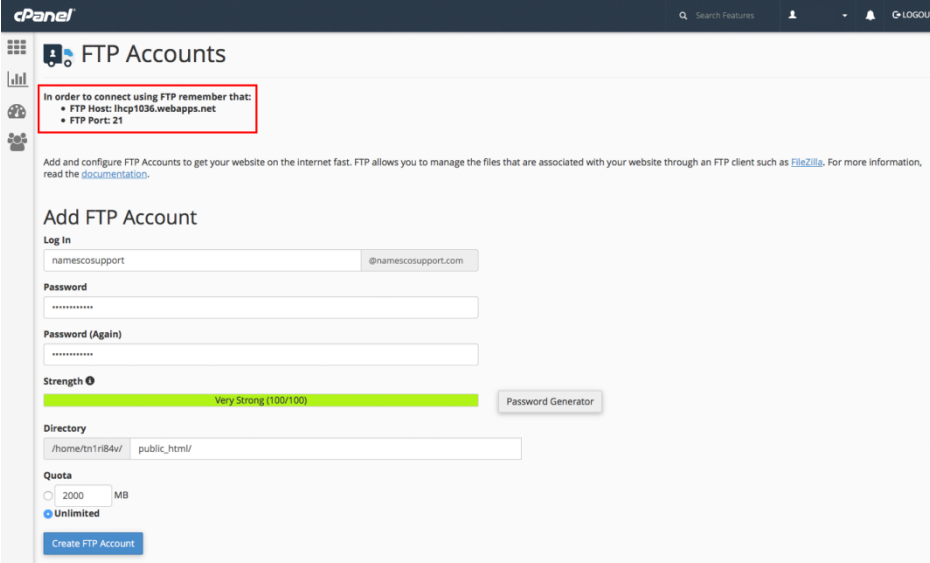

Email Accounts

- Diperuntukkan untuk melakukan pengaturan akun email baru, password, dan perubahan yg diperlukan lainnya.

FTP Accounts

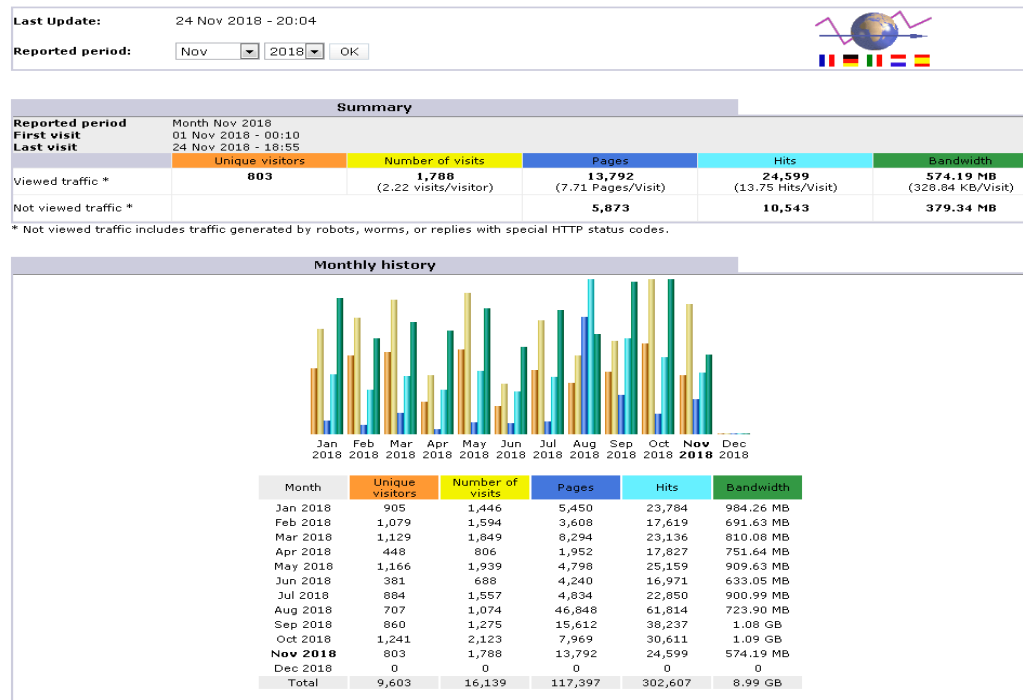

- Diperuntukkan untuk melakukan pengaturan uploading, deleting files menggunakan koneksi khusus FTP (Client).

The screenshot shows the cPanel interface for managing FTP accounts. At the top, there's a header with the cPanel logo and a search bar. Below the header, the main section is titled 'FTP Accounts'. A red box highlights a note: 'In order to connect using FTP remember that: • FTP Host: lhcp1036.webapps.net • FTP Port: 21'. Below this, there's a paragraph explaining that FTP allows managing website files through an FTP client like FileZilla, with a link to the documentation. The 'Add FTP Account' section contains a 'Log In' field with the text 'namescosupport' and a domain dropdown set to '@namescosupport.com'. There are 'Password' and 'Password (Again)' fields, both masked with dots. A 'Strength' indicator shows 'Very Strong (100/100)' with a green bar. A 'Password Generator' button is next to it. The 'Directory' field is set to '/home/t1n184w/public_html/'. The 'Quota' section has two options: '2000 MB' (unselected) and 'Unlimited' (selected). A 'Create FTP Account' button is at the bottom.

Awstats

- Diperuntukkan untuk melakukan monitoring visitor yang telah berkunjung ke website.

IP Blocker

- Diperuntukkan untuk melakukan blocking akses pengunjung terhadap website.

 IP Blocker

This feature will allow you to block a range of IP addresses to prevent them from accessing your site. You can also enter a fully qualified domain name, and the IP Deny Manager will attempt to resolve it to an IP address for you.

Add an IP or Range

IP Address or Domain

Add

Note: You can specify denied IP addresses in the following formats:

Single IP Address
192.168.0.1
2001:db8::1

Range
192.168.0.1-192.168.0.40
2001:db8::1-2001:db8::3

Implied Range
192.168.0.1-40

CIDR Format
192.168.0.1/32
2001:db8::/32

Implies 192.*.*.*
192.
